

Report Title: DREAM
(Defence Related
Environmental
Assessment Methodology)

**Questions and Guidance
Notes
REPORT**

**Question Set : Mediterranean
Kitchen and Dining -
Refurbishment**

Version: 6

Stage: Survey

Biodiversity & Environmental Protection - Survey

code	title	credits
S-BI 4	<p>Preliminary Ecological Appraisal</p> <p>Aim: To ensure compliance with statutory obligations to conserve biodiversity and encourage ecological enhancement of the site, and to minimise impacts on wildlife habitat.</p> <p>Credit Criteria: One credit can be awarded if a competent person undertakes a PEA. A competent person is someone with appropriate qualifications who is also a Member of the Institute of Ecology and Environmental Management (IEEM) (Associate or above) or an equivalent organisation. The person should be licensed if appropriate and necessary. The competent person should follow IEEM “Guidelines for Ecological Impact Assessment”, or guidelines of a similar standard.</p> <p>If appropriate, the PEA should include a desk study, extended phase one Habitat Survey, Ecological Constraints and Opportunities Plan and Ecological Impact Assessment to identify constraints and requirements for further survey, assessment and approvals. This could also be a site wide survey carried out in the last 12 months or where the survey is older steps must have been taken to verify its accuracy. The report will need to record how the</p>	2

project is going to impact on the exact site location.

A further credit can be awarded if the ecological appraisal concludes that the site is of low ecological value.

If the project may impact on a statutory designated site, or protected species, additional statutory assessment and mitigation requirements exist, and must be addressed. Specialist advice from DIO Safety, Environment and Engineering Team should be sought in these instances.

Credit Evidence:

The design team should provide a copy of the ecologist's report.

Further Information:

Biodiversity & Environmental Protection - Survey

code	title	credits
S-BI 5.1	<p>Protection and Enhancement of the Historic Environment</p> <p>Aim: To protect and enhance the historic environment and to ensure its sustainable future.</p> <p>Credit Criteria: To award the credit, the assessor should establish that the historic environment features on the site are known; the likely impacts of the project on those features have been identified together with the necessary mitigation measures; and the necessary permissions obtained (E.G. Listed Building Consent). It should also be necessary to demonstrate that the appropriate documents and Subject Matter Experts (SME) have been considered or consulted.</p> <p>In the UK, the following SME's would normally be consulted:</p> <ul style="list-style-type: none"> · SEE Historic Environment Team s (Archaeology Team and Historic Buildings Team) · Relevant Services' historic branches · Heritage Statutory Bodies (through Historic Environment Teams) · Local Planning Authority · Statements of Significance · Conservation Management Plan · Heritage components of Environmental Management Systems; · Integrated Land/Rural Management Plans or · Integrated Estate Management Plans. · Quadrennial Inspections (QI) 	1

- Quinquennial Inspections of Scheduled Monuments.
- National Planning Policy Framework, Chapter 12
- Institute of Field Archaeologists Code of Practice
- Historic archives and plans

For your project area, you may want to consider consulting with the following:

- Local Historic Environment Teams
- Relevant Services' historic branches, such as Antiquities Department and the Sovereign Base Area Offices
- Heritage Statutory Bodies
- Local Planning Authority
- Conservation Management Plan
- Heritage components of Environmental Management Systems;
- Integrated Land/Rural Management Plans or Integrated Estate Management Plans
- Local Planning Guidance i.e. SBA Legislation

This could also be a site wide survey conducted within the last 12 months

Credit Evidence:

The project team should ensure that the historic environment features are reflected within the Construction Environmental Management Plan (CEMP) together with any mitigation measures. Evidence of any necessary consents should also be presented to the DREAM Assessor.

Further Information:

Energy - Survey

code	title	credits
S-EN 1 *	<p>Energy Infrastructure</p> <p>Aim: To ensure that the energy needs of the project can be met and opportunities for onsite renewable energy and low emission generation are identified.</p> <p>Credit Criteria: One credit is awarded when:</p> <ol style="list-style-type: none"> 1. the local electricity and gas suppliers and distributors, Maintenance Management Organisation and/or the DIO Area Utilities Manager have been consulted, to confirm that there is sufficient capacity within the local electricity and gas infrastructure to meet the demands of the project and; 2. the site has been assessed for the potential for renewable energy generation to reduce the demand on grid electricity and mains gas. Energy from renewable sources means energy from non-fossil fuel sources, such as wind, solar, geothermal, hydropower, biomass and sewage treatment plant gas. The assessment should determine whether any of the above are feasible and provide detail on: <ul style="list-style-type: none"> . Potential contribution to the reduction in regulated carbon dioxide emissions . Potential contribution to overall building 	1

energy demand

- **Lifecycle cost of each technology, including payback period**
- **Constraints – e.g. local planning conditions, operational restrictions etc...**
- **Opportunities – available grants, tariffs etc...**
- **Existing site technologies**

This is a mandatory credit.

Credit Evidence:

Evidence of discussions with local electricity and gas suppliers and distributors, Maintenance Management Organisation and/ or the DIO Area Utilities Manager, should be provided. This could be in the form of correspondence or meeting minutes. In addition, a renewable energy report should be provided, summarising all reviews undertaken and the outcomes of these reviews.

Further Information:

Procurement - Survey

code	title	credits
S-PR 1	<p>Sustainable Development Specialist</p> <p>Aim: To identify key sustainability opportunities, with an aim to achieving best practice design standards.</p> <p>Credit Criteria: The survey team should receive input from a competent person with proven skills and abilities in the design and delivery of sustainable buildings. The competent person could be a DREAM / BREEAM / CEEQUAL accredited assessor and will be required to help facilitate the successful achievement of the target DREAM rating.</p> <p>Credit Evidence: Evidence could include a letter of appointment or a report from the sustainable development specialist, along with details of the specialist's qualifications and experience in sustainable development.</p> <p>Further Information:</p>	1

Procurement - Survey

code	title	credits
S-PR 2	<p>Desktop Surveys</p> <p>Aim: To ensure that all relevant information, findings and recommendations from previous and current studies, surveys, assessments and management systems are incorporated into the project.</p> <p>Credit Criteria: The following studies, surveys, assessments and management systems should be collected (where relevant):</p> <ul style="list-style-type: none"> • Sustainability Appraisal (SA) • Environmental Impact Assessment (EIA) • Strategic Environmental Assessment (SEA) • Natural Environment Clearance & Consents • Historic Environment Clearance & Consents • Flood, Marine & Coastal Consents • Climate Impact Risk Assessment (CIRAM) • Geotechnical surveys • Site travel plans • Site energy management plans • Environmental Management System (EMS) • Integrated Environmental Management Plan (IEMP) • Integrated Land Management Program (ILMP) • Integrated Rural Management Plan (IRMP) • Review of public access arrangements <p>These studies and surveys should be reviewed, and all recommendations should be identified for incorporation into the remaining stages of the</p>	1

project.

Credit Evidence:

The Project Manager should confirm in writing which studies and surveys have been collected, and provide a summary of all findings and recommendations which are relevant to the later stages of the project. The assessor should use his/her judgement to evaluate whether the summary is sufficient for handover to the design, construction and operation teams.

Further Information:

Travel - Survey

code	title	credits
S-TR 1	<p>Green Travel Plan</p> <p>Aim: To encourage people to walk or cycle and reduce dependence on individual motorised transport means.</p> <p>Credit Criteria: Green Travel Plans should identify the specific required outcomes, targets and measures, and set out proportionate future monitoring and management arrangements.</p> <p>As a minimum, the Green Travel Plan should:</p> <ul style="list-style-type: none"> • benchmark travel data • forecast the level of trips by all modes of transport likely to be associated with the development; • provide relevant information about existing travel habits on site and in the surrounding area; • explain how safe pedestrian and cycle routes from the development to other onsite facilities will be provided; • include proposals to reduce the need for travel to and from the site via all modes of transport; • include proposals to enhance the use of public transport services and facilities for cycling and walking; and • consider parking strategy options <p>The credit may be awarded if an existing site wide Green Travel Plan has been consulted and updated</p>	1

accordingly.

Credit Evidence:

The team should provide a copy of the Green Travel Plan.

Further Information:

Water - Survey

code	title	credits
S-WR 1	<p>Water Infrastructure</p> <p>Aim: To ensure that the water needs of the project can be met.</p> <p>Credit Criteria: One credit can be awarded for consulting the appropriate water authority to confirm that there is sufficient capacity within both the local water supply and wastewater disposal infrastructure to meet the demands of the project during its projected lifecycle. This should include consideration of future climate change.</p> <p>For projects on Aquatrine sites, the DIO PFI Aquatrine Team / Aquatrine Service Provider should be contacted to determine future demand availability / waste water capacity.</p> <p>For projects on non-Aquatrine sites, the incumbent statutory undertaker (i.e. Water Company) should be contacted to determine future demand availability / waste water capacity.</p> <p>Credit Evidence: To achieve this credit, evidence of discussions with the appropriate water authority, should be provided. This could be in the form of correspondence or meeting minutes.</p> <p>Further Information:</p>	1

Water - Survey

code	title	credits
S-WR 2	<p>Flood Risk</p> <p>Aim: To ensure the site is not at risk of flood or the identified risks will be addressed in the design.</p> <p>Credit Criteria: It is MOD policy that decisions involving estate change should take account of present and future flood risk over the development's lifetime.</p> <p>A credit can be awarded for undertaking a flood risk assessment using the appropriate planning guidance and reviewing natural drainage to determine whether the site is at risk from flooding. The flood risk assessment must take account of future climate change. If flooding is a risk on the site, a strategy should be developed for mitigating the risks.</p> <p>If a flood risk assessment has been undertaken on the site in the last five years and if it has been completed under the most recent relevant planning guidance then this credit can be awarded.</p> <p>Credit Evidence: A copy of the flood risk assessment and (where relevant) mitigation strategy should be provided to the assessor.</p> <p>Further Information:</p>	1

Waste - Survey

code	title	credits
S-WS 1	<p>Waste Infrastructure</p> <p>Aim: To ensure that the waste recycling and disposal needs of the project can be met.</p> <p>Credit Criteria: One credit can be awarded for consulting the local authority, or site utility or infrastructure manager, to confirm that collection of wastes and recyclable materials is available to meet the demands of the project.</p> <p>Credit Evidence: Evidence of discussions with the local authorities, or site utility or infrastructure manager, should be provided. This could be in the form of correspondence or meeting minutes.</p> <p>Further Information:</p>	1

Stage: Design

Biodiversity & Environmental Protection - Design

code	title	credits
D-BI 1	<p>Site Ecology Design</p> <p>Aim: To ensure compliance with statutory obligations to conserve biodiversity and encourage ecological enhancement of the site, and to minimise impacts on wildlife habitat.</p> <p>Credit Criteria: Credits can be awarded where the recommendations of the Preliminary Ecological Appraisal completed at S-BI-4 have been incorporated into the design and have resulted in:</p> <p>Avoidance – 2 credits Enhancement – 1 credit</p> <p>(Plus 1 credit for offsite projects, up to a total credit award of 3 credits. The offsite credit is independent of the other credits.)</p> <p>Avoidance: undertaken at the design stage, requires that the building and any associated hardstand be positioned on the site to avoid existing habitats and hence minimise impacts.</p> <p>Enhancement: defines an improvement of the ecological value of the site; e.g. reintroducing appropriate indigenous vegetation, clearing intrusive vegetation (such as Japanese Knotweed) or linking isolated habitats, and should take account of</p>	3

habitats and ecosystem characteristics within the surrounding area.

If the project may impact on a statutory designated site, or protected species, additional statutory assessment and mitigation requirements exist, and must be addressed. Specialist advice from the DIO Safety, Environment and Engineering Team should be sought in these instances.

Off-site projects involve providing resources (of any type) to support off-site ecological and biodiversity projects in the local area through managed schemes and programmes. This could include local schools and ecological or other nature groups.

Credit Evidence:

The design team should provide the appropriate documentary evidence (e.g. photos of the existing site) and drawing information to demonstrate the selected strategy. The assessor should confer with the project ecological consultant or other appropriate person to confirm which credits can be awarded. For the additional credit for off-site projects there shall be appropriate documentary evidence in the form of a letter or email from the receiving organization confirming the nature and type of assistance received.

Further Information:

Biodiversity & Environmental Protection - Design

code	title	credits
D-BI 2	<p>Protection and Enhancement of the Historic Environment</p> <p>Aim: To protect and enhance the historic environment and to ensure its sustainable future.</p> <p>Credit Criteria: To award the credit, the assessor should ensure that the heritage integrity of the site is considered and where possible enhanced by the design of the construction. This includes:</p> <ul style="list-style-type: none"> • Location and layout • Special features including proximity to a historic feature • Sympathetic colour schemes and construction materials • Stakeholder consultation • Vernacular architecture, landscape and townscape • Historic maps, plans and archives on site should be referred to the Historic Environment Teams • The relevant heritage sections of the Design Excellence Evaluation Process (DEEP) have been followed and taken into consideration. <p>If the historic environment assessment carried out at S-BI-5 found no historic environment features NA may be selected for this credit.</p> <p>Credit Evidence: The project team should demonstrate that the</p>	1

heritage of the site has been actively considered within the design phase of the project. They should provide evidence of consultations and how the various aspects as outlined above have been considered.

Further Information:

External EQ - Design

code	title	credits
D-EEQ 1.1	<p>Reducing Global Warming Potential</p> <p>Aim: To reduce the amount of Global Warming substances potentially released to the atmosphere. Air-conditioning systems, if required, should avoid the use of substances with high GWP.</p> <p>Credit Criteria: It is MOD policy not to specify air conditioning for buildings. Three credits are achieved if air conditioning is designed out.</p> <p>One credit can be achieved if all other cooling techniques (i.e. insulation, passive cooling) have been proven unacceptable and it can be proven through thermal modelling, engineering calculations, equipment specifications and/or working condition requirements that air conditioning is necessary for operational requirements. Furthermore, if air conditioning is installed for operational requirements, the system must have installed a good leak prevention / detection system and refrigerant with a GWP of less than 5.</p> <p>The assessor must be provided with proof that any specific design or operational requirement has followed the guidelines of “Design and Maintenance Guide 07 – Justifying the Provision of Air Conditioning”.</p> <p>Credit Evidence: The assessor should be provided with the appropriate calculations / modelling results demonstrating that air conditioning is or not required or, if appropriate, specifications stating the type of refrigerant as evidence.</p>	3

Further Information:

External EQ - Design

code	title	credits
D-EEQ 2	<p>NOx emissions of heating source</p> <p>Aim: To reduce the nitrogen oxides emitted into the atmosphere.</p> <p>Credit Criteria: Credits can be achieved as follows:</p> <ul style="list-style-type: none"> • <100 mg/kWh output energy = 1 • <70 mg/kWh output energy = 2 • <40 mg/kWh output energy = 3 <p>This should also include the emission of a heat source if it is from central services providing it is quoted in the same rates/ units.</p> <p>Note:</p> <ul style="list-style-type: none"> • These are dry NOx emissions at 0% oxygen. • The boiler or calorifier NOx emission rating that is the greatest should be selected for assessment. • No credits permitted for the use of electricity sourced from the National Grid for space heating. • Where district CHP or heating only is provided, the performance of the central plant should be considered. • Manufacturer's specifications should be used to determine mg/kWh. <p>Credit Evidence:</p>	3

The design team should provide a copy of the specification stating the type of plant (make and model), and evidence of the maximum NOx emission rate from the manufacturer (e.g. correspondence, literature, specifications).

Further Information:

External EQ - Design

code	title	credits
D-EEQ 3	<p>Zero ODP and GWP <5 Insulants</p> <p>Aim: To reduce the amount of ozone depleting substances and substances with global warming potential to the atmosphere.</p> <p>Credit Criteria: Some blown insulation products contain gases that are harmful to the ozone layer, such as chlorofluorocarbons (CFCs) or hydrochlorofluorocarbons (HCFCs), or have a global warming potential, such as hydrofluorocarbons (HFCs). The design team should specify insulants which have zero ODP and GWP less than five. This should include all insulation products applied to building services systems as well as the building fabric insulation.</p> <p>Credit Evidence: The design team should provide copies of the specification clauses stating all types of insulation to be used within the building, and evidence from the manufacturers (e.g. correspondence, literature, specifications) which confirms that the insulation is zero ODP and GWP less than five. Note: Where insulation is inherently zero ODP and GWP less than five (mineral wool, glass fibre), evidence from the manufacturers is not required.</p> <p>Further Information:</p>	1

Energy - Design

code	title	credits
D-EN 1.1	<p>Building Regulations Enhancement</p> <p>Aim: To reduce CO₂ emissions to the atmosphere.</p> <p>Credit Criteria: To achieve this/these credit(s), the average, area-weighted U-value of the building should be calculated. This value is then compared against the minimum target U-values as set out in the latest relevant devolved administration building regulations. Credits are awarded based on the improvement compared to the minimum target U-values:</p> <ul style="list-style-type: none"> • No improvement = 0 credits • > 5% = 2 credits • > 10% = 3 credits • > 15% = 4 credits <p>Credit Evidence: The design team should provide a copy of the calculations and results demonstrating improvement. Evidence may be provided in the form of an Energy Performance Certificate.</p> <p>Further Information:</p>	4

Energy - Design

code	title	credits
D-EN 2.3	<p>Building Air Leakage Design</p> <p>Aim: To reduce the thermal load associated with air infiltration.</p> <p>Credit Criteria: To award the credit, building envelope should be designed to reduce air leakage. Credits will only be awarded if an improvement is made on a base rate of air infiltration. Credits are determined as follows:</p> <ul style="list-style-type: none"> • < 8m³/(h.m²) @50Pa = 1 credit • < 6m³/(h.m²) @50Pa = 2 credits • < 4m³/(h.m²) @50Pa = 3 credits <p>Credit Evidence: The design team should provide a copy of the calculation results demonstrating improvement. This could be taken from a sample of the construction type eg for modular build projects.</p> <p>Further Information:</p>	3

Energy - Design

code	title	credits
D-EN 3	<p>Low or Zero Carbon (LZC) Technologies</p> <p>Aim: To reduce CO₂ emissions to atmosphere and maximise sourcing of energy from LZC resources.</p> <p>Credit Criteria: Credits can only be awarded if LZC technologies recommended in the feasibility study conducted at S-EN1 have been specified.</p> <ul style="list-style-type: none"> • One credit can be awarded when the LZC technology specified contributes >5% of overall building energy demand or result in >5% reduction in regulated carbon dioxide emissions. • Two credits can be awarded when the LWC technology specified contributes >10% of overall building energy demand or result in >10% reduction in regulated carbon dioxide emissions. <p>Any installation should be done in consultation with the site manager and/or Area Utilities Manager.</p> <p>Credit Evidence: The assessor should provide calculations showing the estimated output of the LWC technology and its contribution to overall building energy demand and/or reduction in regulated carbon dioxide emissions. The assessor should also provide copies of meeting minutes or notes relating to discussions with site manager / Area Utilities manager.</p> <p>Further Information:</p>	2

Energy - Design

code	title	credits
D-EN 4	<p>Reduction of Carbon Dioxide Emissions</p> <p>Aim: To reduce the emissions of CO2 to atmosphere</p> <p>Credit Criteria: Credits will be given to reduce the energy demand and hence CO2 emissions through specifying techniques for heat recovery or passive design. Either one or all of the options can be used within the project.</p> <ul style="list-style-type: none"> • 2 credits for heat recovery, or re-use initiatives. These credits may be awarded if heat generated from any process where the heat would otherwise be lost is collected and meaningfully re-used. Sources of waste heat or energy might include refrigeration units, boilers, power generation plant etc. • 2 credits for passive design measures. These credits may be awarded if building energy demands (heating, cooling, lighting etc...) are meaningfully reduced through the use of passive design measures. Passive design can include consideration of building orientation, shading, material selection etc... <p>Credit Evidence: Evidence shall be provided of; a) energy recovery and reuse from the waste heat generated b) passive design measures within the building through provision of drawings, specifications etc.</p>	4

Further Information:

Energy - Design

code	title	credits
------	-------	---------

D-EN 5

Lighting Flexibility and Control

Aim:

To minimise energy use from artificial lighting.

Credit Criteria:

Credits are awarded as follows for implementing the following features in the lighting control strategy:

- Zoned lighting – 1 credit
- Occupancy and daylight linked lighting – 1 credit
- Circadian rhythm – 1 credit

Zoned lighting – 1 credit

The project design should have appropriately zoned lighting to allow for varying occupancy levels and daylighting. The zoning should include the following, as a minimum:

- Separate zoning and controls for office, café, lab, kitchens, circulation, meeting, lecture, conference and other space types.
- Cafés and bars should be zoned to allow for 50% and 100% capacity.
- Offices should be zoned for cellular offices and no more than six workspaces in open plan offices.
- Areas adjacent to windows and other glazed areas should be zoned separately to maximise use of daylight.

Occupancy and daylight linked lighting controls

3

– 1 credit

Occupancy detection linked control of lighting should be provided in WCs, circulation spaces, stores, and as appropriate in other areas. This should be in line with health and safety requirements.

The design should also include a daylight linking strategy which has been applied to luminaires in all indoor offices and meeting rooms where good daylight is available. The average daylight factor in these areas should be greater than 2.5%. Lighting which is immediately adjacent to windows in office areas and meeting rooms should be zoned separately to allow for greater flexibility with daylight levels. Luminaires should have an automatic control to compensate for daylight and provide the correct level of illuminance. Closed loop dimming sensors should be considered for luminaires along glazed building perimeters.

One credit is achieved where internal lighting is automatically switched on or off or dimmed according to occupancy and/or availability of daylight

Circadian rhythm – 1 credit

One credit can be awarded where circadian lighting systems capable of controlling the colour and intensity of the light at particular times, with feedback from the illuminated space, have been specified. For example, blue wavelengths are beneficial during daylight hours because they boost attention, reaction times and mood, but appear to be disruptive at night. So as part of a control regime, the 'blue light' could be controlled throughout the day to transition from a stimulating 'biological light' (with maximum blue content) to a restful 'biological darkness' (with little or no blue content).

The above strategies should be developed in consultation with a CIBSE Qualified Lighting Engineer (e.g. Member of the Society of Light and Lighting (MSLL)).

Credit Evidence:

The design team should provide specifications and schematics demonstrating the lighting strategy.

Further Information:

Energy - Design

code	title	credits
D-EN 6	<p>Lighting Levels</p> <p>Aim: To minimise energy use in lighting and thus reduce CO₂ emissions.</p> <p>Credit Criteria: To ensure occupant comfort while minimising energy consumption in lighting, the lighting levels from the relevant CIBSE Lighting Guide should not be exceeded.</p> <p>If you are required by contractual arrangements to work to JSP scales, this credit is not applicable.</p> <p>Credit Evidence: To gain the credit, specification and schematic drawing evidence should be supplied to show the lighting levels of all areas within the building. If this credit is not applicable, the assessor should be provided with the extract from the contract which applies JSP scales.</p> <p>Further Information:</p>	1

Energy - Design

code	title	credits
D-EN 7	<p>Internal and External Luminaires</p> <p>Aim: To maximise energy efficiency in lighting and reduce CO₂ emissions.</p> <p>Credit Criteria: To exceed standards laid down in the latest relevant devolved administration building regulations. To award this credit, a lighting plan should be developed, in consultation with a CIBSE Qualified Lightening Engineer (e.g. Member of the Society of Light and Lighting (MSLL), that includes appropriate lighting layout and method of controls (switches - including remotely controlled switches). The plan should include a luminaire schedule that shows the efficacy of each lamp and how that corresponds to the luminaires specified.</p> <p>Credit Evidence: The design team should provide a copy of the lighting plan and supporting calculations</p> <p>Further Information:</p>	1

Energy - Design

code	title	credits
D-EN 10	<p>Boiler Efficiency</p> <p>Aim: To ensure the specification of energy efficient heat generating plant and reduce CO2 emissions.</p> <p>Credit Criteria: Credits can be awarded if the summer and winter operating efficiency of the project boilers meets the following values:</p> <p>One credit:</p> <ul style="list-style-type: none"> • Natural Gas - 91% • LPG - 93% • Oil - 84% • Biomass - 75% <p>Two credits:</p> <ul style="list-style-type: none"> • Natural Gas - 95% • LPG - 97% • Oil - 87% • Biomass - 78% <p>One credit will be awarded if it is necessary to use an existing site wide scheme, and the main boiler is of low efficiency, but contact has been made with the site manager suggesting that improvements be made.</p> <p>Credit Evidence: Specification clauses and/or equipment schedules confirming the types of boilers being installed, and</p>	2

supporting technical evidence from the manufacturers should be provided to confirm the efficiency.

Further Information:

Energy - Design

code	title	credits
D-EN 13 *	<p>Energy Metering</p> <p>Aim: To facilitate energy management and saving initiatives, thus reducing CO2 emissions.</p> <p>Credit Criteria: Metering should be provided to all incoming supplies of gas and electricity. In addition, sub-metering to all major energy uses within the building should be provided in compliance with the appropriate Building Regulations.</p> <p>The metering of major energy uses should allow >90% of energy use to be captured.</p> <p>Credit Evidence: Type and location of meters should be indicated on drawings together with supporting evidence to demonstrate compatibility of data to BMS requirements.</p> <p>Further Information:</p>	2

Energy - Design

code	title	credits
D-EN 16	<p>Building Performance for Occupant Comfort</p> <p>Aim: To improve energy efficiency by optimising building performance through alternative sources of heating and cooling to meet occupant comfort.</p> <p>Credit Criteria: An analysis of the expected building performance should be undertaken and the results used as an aid to inform the design team in the overall building design. Where analysis shows likely discomfort of occupants, passive heating and cooling controls should be employed to moderate the internal environment. Comfort criteria are outlined in CIBSE Guide A.</p> <p>Credit Evidence: The design team should provide the internal and external design conditions for the heating and ventilation systems, and demonstrate that these comply with guidance outlined in CIBSE Guide A.</p> <p>Further Information:</p>	1

Energy - Design

code	title	credits
D-EN 17	<p>Energy Efficient Equipment</p> <p>Aim: To encourage the procurement of energy efficient equipment</p> <p>Credit Criteria: Two credits can be awarded when the following appliances achieve the Government Buying Standard Best Practice Level:</p> <ul style="list-style-type: none"> • Chest freezers, fridge freezers, upright freezers and refrigerators must have an 'A++' rating for energy efficiency. • Dishwashers must be 'A+++' energy labelled. • Domestic electric ovens must have an 'A' rated energy label. • Commercial ovens must meet Energy Star or equivalent criteria. • Vented and Condensing tumble dryers must be 'A+' rated or above. • Washer dryers must have an 'A' rating. • Domestic washing machines must be A+++ rated for Energy Efficiency. <p>If none of the above are specified please select NA.</p> <p>Credit Evidence: The design team should provide the specifications of the proposed appliances, including confirmation of their ratings from the manufacturers.</p> <p>Further Information:</p>	2

Energy - Design

code	title	credits
------	-------	---------

D-EN 18	Energy Efficient Lifts	2
----------------	-------------------------------	---

Aim:

To encourage the procurement of the optimum number of energy efficient lifts.

Credit Criteria:

One credit can be awarded for:

- conducting an analysis to determine the optimum number of lifts based on potential usage patterns
- comparing energy usage of two types of lifts in accordance with BS EN ISO 25745 and specifying the system with the lowest energy consumption

A further credit can be awarded if the lift(s) specified have the following features:

- a standby condition available for off-peak periods
- lighting that provides an average lamp efficacy of >60 lamp lumens/circuit Watt

If no lifts are specified please select NA.

Credit Evidence:

For the first credit evidence should be provided that demonstrates that a) usage patterns b) energy usage have influenced the procurement of lifts. For the second credit, specification clauses or equipment schedules confirming the types of lifts

being installed and supporting technical evidence from the manufacturers should be provided to confirm the standby condition and lamp efficacy.

Further Information:

Internal EQ - Design

code	title	credits
D-IEQ 2.1	<p>Day lighting</p> <p>Aim: To reduce artificial lighting requirements and thus reduce CO₂ emissions.</p> <p>Credit Criteria: Two credits can be achieved if the daylight factor is equal to or greater than 5% across 80% of the floor area of the building. This should be assessed at a height of 800mm.</p> <p>One credit may be achieved where the daylight factor is greater than or equal to 2%, but less than 5%, in those circumstances where design constraints make a higher daylight factor unachievable.</p> <p>Credit Evidence: The design team should demonstrate compliance by providing calculations to show a daylight factor. Where one credit is awarded the design team should provide evidence of the design constraints.</p> <p>Further Information:</p>	2

Internal EQ - Design

code	title	credits
D-IEQ 3	<p>Safe Lighting Conditions</p> <p>Aim: To promote a healthy indoor environment by reducing health and safety risks associated with low frequency lighting. High frequency lighting is also more energy efficient.</p> <p>Credit Criteria: Where fluorescent luminaries are specified they should be fitted with high frequency electronic ballasts.. Illuminance levels should be appropriate to the tasks undertaken, for example, in office areas, high frequency lighting impacts less upon visual health, whilst in hangar and workshop areas, high frequency lighting poses less risk of stroboscopic effects when operating machinery.</p> <p>Credit Evidence: The design team should provide specifications and/or drawings to confirm that high frequency electronic ballasts are installed to fluorescent luminaires in all working areas.</p> <p>Further Information:</p>	1

Internal EQ - Design

code	title	credits
D-IEQ 4	<p>Thermal Zoning</p> <p>Aim: To provide local control according to different load conditions and optimise staff comfort levels. The ability to provide out-of-hours local heating to spaces and separate zones independently of one another should also be provided to optimise energy usage</p> <p>Credit Criteria: The design team should demonstrate that appropriate thermal zoning has been provided, incorporating the following:</p> <ul style="list-style-type: none"> • Local heating control to different areas should be easy to understand with manual operation such that occupants have a satisfactory level of local control over their environment. An appropriate system would be TRV control of radiators. The control system should also include a manual override facility for out-of-hours use. • Space heating systems designed with an understanding of the likely occupancy types and patterns of different zones. • Space heating systems for larger areas should have a simple, easy to use control system to provide manual override of heating program for out-of-hours use. The larger spaces should have separate thermal control zones of 200m² to allow for operations in one area of the process area only. This will be best achieved through the use of a radiant heating system. 	1

Credit Evidence:

For local heating control and space heating systems the design team should provide evidence of the proposed method of control, including specification clauses and schematic drawings.

Further Information:

Internal EQ - Design

code	title	credits
D-IEQ 5	<p>Acoustic Design</p> <p>Aim: To ensure a safe and comfortable working or living environment, and enable intelligible speech in the offices.</p> <p>Credit Criteria: Predicted internal noise levels should be in accordance with noise levels and level ranges as stated in BS8233:2014. Where a minimum level is also specified, this it so ensure reasonable privacy in shared areas.</p> <p>Noise emissions from plant or from processes within the building should be in compliance with local authority standards where applicable.</p> <p>Credit Evidence: The design team should provide calculations or a written statement from an acoustician to demonstrate that internal noise levels to unoccupied spaces do not exceed the criteria.</p> <p>Further Information:</p>	3

Internal EQ - Design

D-IEQ 6	<p>External Views</p> <p>Aim: To reduce eyestrain for building occupants by allowing long distance views and the provision of visual connection to the outdoors.</p> <p>Credit Criteria: All office workstations should have a view, either externally or to an adequately sized and naturally lit internal atrium. Office workstations should be no more than seven metres from glazing.</p> <p>Credit Evidence: The design team should provide furniture layout drawings which demonstrate that all office workstations have a view, and that workstations are no more than seven metres from glazing.</p> <p>Further Information:</p>	1

Internal EQ - Design

code	title	credits
D-IEQ 7	<p>Internal Emissions</p> <p>Aim: To prevent emissions of air pollutants and encourage healthy internal environments.</p> <p>Credit Criteria: One credit can be awarded for developing a plan that specifically addresses indoor air pollution. The plan should consider how contaminant sources will be managed, how air pollution will be tested and how air quality will be maintained once the building is occupied.</p> <p>A further two credits can be awarded if the internal finishes comply with the following performance standards:</p> <ul style="list-style-type: none"> • Paints and varnishes –should be ‘no’ or ‘low’ VOC and comply with EU Directive 2004/42/CE ('Paints Directive') • Wood panels –should be low emission formaldehyde (e.g. class E1 or better), be ‘no’ or ‘low’ VOC and comply with BS EN 13986:2004 +A1:2015 Wood-based panels for use in construction • Timber structure –should be low emission formaldehyde (e.g. class E1 or better) and comply with BS EN 14080:2005 Timber structures - Glues laminated timber • Wood Flooring – should be low emission formaldehyde (e.g. class E1 or better), be ‘no’ or ‘low’ VOC and comply with BS EN 14342:2005+A1:2008 Wood flooring - 	3

Characteristics, evaluation of conformity and marking.

- **Resilient textile and laminated floor coverings** – should be low emission formaldehyde (e.g. class E1 or better), be ‘no’ or ‘low’ VOC and comply with BS EN 14041:2006 Resilient, textile and laminate floor coverings - Essential characteristics
- **Flooring adhesives** – should be ‘no’ or ‘low’ VOC and comply with BS EN 13999-1:2013 Adhesives
- **Wall coverings** – should be low emission formaldehyde (e.g. class E1 or better) and comply with BS EN 233:1999 Wallcoverings in roll form - Specification for finished wallpapers, wall vinyl’s and plastic wall coverings.

Credit Evidence:

For the first credit a copy of the air pollution plan should be provided. For the second and third credits, the design team should provide specifications, drawings or testing results which confirm that the internal finishes comply with the compliant performance standard listed above.

D-IEQ 8	<p>Adaptation to Climate Change</p> <p>Aim: To ensure that MOD policy for addressing the issues of adaptation to climate change has been addressed and that the building will be fit for purpose during its projected life cycle.</p> <p>Credit Criteria: Buildings can be designed for longevity under changing conditions by anticipating the likely impacts and matching the specification to the environmental pressures that will be experienced.</p> <p>One credit can be awarded if a risk assessment to identify the impacts of climate change on the building over its projected life cycle has been completed.</p> <p>The risk assessment should consider, as a minimum, the impact of changes in temperature, precipitation and extreme weather conditions. Potential impacts could include:</p> <ul style="list-style-type: none"> · a higher risk of flooding; · an increased pressure on water resources; · increased risk of subsidence; · higher risk of thermal discomfort; · increased risk of damp, condensation and mould. <p>When available, the risk assessment should take account of the sites Climate Resilience Risk Register. In addition, the risk assessment should refer to UK Climate Projections (UKCP09) and the appropriate Regional and/or Local Authority Climate</p>	2

Change Risk Assessments.

The second credit can be awarded when the findings of the risk assessment have influenced the design and, where appropriate, enhanced the buildings resilience to future climate change.

Credit Evidence:

For the first credit, the project team should provide a copy of the risk assessment. For the second credit, the project team should demonstrate via specifications, drawings or other appropriate evidence, the features which have been designed into the building that will enhance its resilience to climate change.

Procurement - Design

code	title	credits
D-PR 7	<p>Recycled Content of Building Materials</p> <p>Aim: To encourage the reuse and recycling of building materials.</p> <p>Credit Criteria: Encouraging the reuse and recycling of building materials reduces consumption of primary resources and minimises the quantity of UK waste being sent for disposal in landfill. Reuse / recycling of materials can also reduce costs by avoiding landfill disposal charges and minimising transportation. Options include: reuse of reclaimed products; local recycling of construction and demolition waste; and the selection of manufactured products containing a higher fraction of recovered materials. This objective links to good practice in site waste management.</p> <p>Use the online tool developed by WRAP (the Waste & Resources Action Programme) to determine the value of recycled content used and the top ten opportunities to increase this outcome.</p> <p>The minimum outcome is 10% recycled content as a proportion of the total value of materials used on the project. The Quick Wins are the largest contributors to the potential increase in recycled content for the project, going from baseline/standard practice to cost-neutral good practice. They involve simple substitution of one product/material by an equivalent mainstream alternative (e.g. a competing brand with higher recycled content).</p>	1

The Credit is awarded for implementing five of the top ten Quick Win opportunities PROVIDING the projected recycled content of the project is at least 10%.

Note that reuse of a product or material (such as demolition waste used as fill) is attributed 100% recycled content by value, and should be preferentially investigated as a potential Quick Win.

Credit Evidence:

The team should provide the standard report from the WRAP tool quantifying the projected overall level of recycled content by value and identifying the top ten Quick Win opportunities for the project. Details of the Quick Wins selected for implementation should be specified within this report. Evidence of the actual use of higher recycled content products for the selected Quick Wins may be sought during the construction phase (e.g. through review of product data sheets, delivery notes or invoices).

Water - Design

code	title	credits
D-WR 8	<p>Water Using Appliances</p> <p>Aim: To reduce consumption rates from appliances that use water.</p> <p>Credit Criteria: Where the following appliances are specified, the following consumption rates must be achieved.</p> <ul style="list-style-type: none"> • Domestic sized dishwasher (up to 14 place settings) - volume per (typical) cycle must not exceed 8 litres. • Commercial sized dishwasher – volume per rack must not exceed 4 litres. • Domestic sized washing machine (up to 5kg load capacity) - volume per (typical) cycle must not exceed 35 litres. • Commercial sized washing machine - volume per kg must not exceed 5 litres. • Waste disposal unit – volume per minute must not exceed 0 litres <p>This credit may be awarded by default if none of the above are specified.</p> <p>Credit Evidence: The assessor should ensure that the designs specify the appropriate appliances.</p> <p>Further Information:</p>	1

Waste - Design

code	title	credits
D-WS 1	<p>Storage and Collection of Food & Recyclable Wastes</p> <p>Aim: To reduce items sent to landfill and reduce the requirement for the use of virgin materials through recycling.</p> <p>Credit Criteria: The credit can be awarded where the building design allows for the on-site secure disposal, segregation, storage and collection of recyclable and compostable wastes.</p> <ul style="list-style-type: none"> • Collection bins should be placed in prominent positions throughout the building for personnel to dispose of paper, plastic, metal, glass and general waste. • Secure, labelled storage space for paper, plastic, metal, glass, compostable and general waste should be allocated in close proximity to the buildings food preparation and dining areas in an internal or external service area, with easy access for collection. • Sufficient space allocation (1m² per 1000m² of floor area, minimum 5m² , maximum 10m²). • Compostable food wastes, where produced, should be stored separately in the external service area in a well ventilated, covered and secure storage container before being collected and transported to nearby composting facilities either on site or in the local 	1

community. The food waste storage should be secure from vermin or local wildlife.

This credit can also be awarded where establishment wide recycling facilities already exist and are used or where offsite segregation and recycling is already in place.

Credit Evidence:

The assessor should be provided with (1) layout drawings which show the locations, numbers and types of collection bins throughout the building, or (2) general arrangement drawings which show the location and size of the establishment recycling facility, or (3) details of off site segregation and recycling arrangements.

Further Information:

Waste - Design

code	title	credits
D-WS 2	<p>Design for Waste Minimisation</p> <p>Aim: To maximise resource efficiency and minimise disposal of material to landfill.</p> <p>Credit Criteria: One credit can be achieved for including three relevant design features.</p> <p>Buildings can be designed to optimise resource efficiency, by minimising waste generation during construction, using reclaimed materials, and making materials available for reuse at the end of the useful life of the building.</p> <p>Examples of relevant design features include:</p> <ul style="list-style-type: none"> • Modular off site construction. This reduces on-site waste generation during construction, and prevents other problems such as over-ordering. • Pre-fabrication, or off-site fabrication. This minimises waste and maximises construction efficiency. The structure, external cladding, plant and roof can incorporate pre-fabricated modular construction components. • Use reclaimed materials in the construction of the building. This could include reuse of materials, components or equipment from other sources such as dismantled buildings. • Design for deconstruction. This enables the building to be dismantled at the end of its useful life, and the materials, components and equipment can be salvaged for reuse elsewhere. 	1

Credit Evidence:

The design team should demonstrate via specifications, drawings or other appropriate evidence, the features which have been designed into the building to minimise waste generation during construction and decommissioning.

Stage: Construction

Biodiversity & Environmental Protection - Construction

code	title	credits
C-BI 1 *	<p>Construction Pollution Control Plan</p> <p>Aim: Reduce the potential for pollution to water sources, air, land and soil during construction.</p> <p>Credit Criteria: Minimisation of the following is required through site practices;</p> <ul style="list-style-type: none"> . Pollution to air through dust emissions . Pollution of water courses and ground water; and . Pollution of soil and land through spills. <p>A site-specific sedimentation, air pollution and spill control plan should be developed and implemented. This document should highlight methods of preventing loss of materials during construction by stormwater runoff and/or wind erosion, preventing sedimentation of particulates in surface water sewers or watercourses, preventing air pollution with dust and particulate matter and preventing spills of substances such as fuel and paint which can result in soil contamination.</p> <p>Credit Evidence: A site-specific sedimentation, air pollution and spill control plan, which meet the requirements</p>	1

listed in the criteria section above, should be provided by the contractor. Further to this, evidence should be provided that the plan has been implemented and confirmed at post construction review.

Further Information:

Biodiversity & Environmental Protection - Construction

code	title	credits
C-BI 2	<p>Protection and Enhancement of the Historic Environment</p> <p>Aim: To protect and enhance the historic environment and to ensure its sustainable future.</p> <p>Credit Criteria: To award the credit, the Assessor should establish that the heritage features are appropriately protected during the construction of the structure. This includes ensuring that:</p> <ul style="list-style-type: none"> • Action plans are in place to protect features from physical damage (including direct and indirect impacts of construction activities e.g. vibration); • A recording methodology should be in place to record any historic/archaeological features; • Conditions made in relevant planning permissions, listed building or scheduled monument consents are adhered to; • If archaeology is discovered during the construction phase, then advice should be sought from the DIO Historic Environment TEam. National Planning Policy Framework procedures must be consulted and followed where necessary; and; • If any historic artefacts or treasure are found then the find must be reported to the site Estate Surveyor and the Archaeology Advisor. The Estate Surveyor should follow procedures outlined in JSP 362 Ch.6 (to be superseded by JSP 850) and the Defence Estates Guide Ch.24. 	1

If the historic environment assessment carried out at S-BI-5 found no historic environment features and no further features were discovered during construction please select NA.

Credit Evidence:

The project team should demonstrate that the heritage of the site has been actively protected within the construction phase of the project and any heritage issues that have arisen have been managed according to MoD policy.

Biodiversity & Environmental Protection - Construction

code	title	credits
C-BI 3	<p>Site Ecology Implementation</p> <p>Aim: To encourage conservation and improvement of the site ecology, and to reduce impact on wildlife habitat.</p> <p>Credit Criteria: One credit is awarded when it can be shown that the ecological design agreed at D-BI-1 has been secured, allocated and implemented at the construction phase of the project.</p> <p>Credit Evidence: The contractor should provide the appropriate documentary evidence (e.g. a CEMP) to demonstrate that agreed impact avoidance, mitigation, compensation or monitoring measures been secured, allocated and implemented at the construction phase of the project. The assessor should confer with the project ecological consultant or other appropriate person (i.e. IEEM registered) to confirm the credit has been achieved.</p> <p>Further Information:</p>	1

External EQ - Construction

code	title	credits
C-EEQ 1	<p>Noise and Light Pollution Control on the Construction Site</p> <p>Aim: To reduce the potential for noise and light pollution and hence adverse health impacts on construction workers and neighbours during construction.</p> <p>Credit Criteria: Construction sites typically operate before and beyond the average working day and working week (09.00 to 17.30 Monday to Friday). Noise is often generated from site activities and artificial lighting is often used within and outside these latter hours.</p> <p><i>Noise:</i> To prevent noise pollution, a site-specific noise plan should be prepared and implemented prior to construction. The plan should identify how site activities fall within the remit of The Control of Pollution Act 1974, and The Environmental Protection Act 1990 (EPA 1990). This plan should include requirements for noise monitoring before, during and after construction, methods for preventing excessive noise pollution to the surrounding area, allowable noise limits during the day, evening and night, and other restrictions such as operating hours for machinery, equipment etc. Measurements of LA10T, LA90T, LAeqT and LAm_{ax} of noise before, after and during construction should be made to determine if the noise amounts to a nuisance in terms of.</p> <p>If the measured noise levels are not compliant with The Control of Pollution Act 1974 and The</p>	1

Environmental Protection Act 1990, and exceed the recommended levels, provision of sound barriers, acoustic partitions and revised hours of work shall be considered.

Light:

To prevent light pollution, a site-specific light pollution plan should be prepared and implemented prior to construction. The plan should outline how temporary lighting is to be used during construction, and measures to prevent light pollution. The plan must be in accordance with the ILE's *Guidance Notes for the Reduction of Obtrusive Light* (GN01:2011).

All noise and light complaints should be recorded. When a complaint is received, measurements should be undertaken immediately, and if necessary actions should be taken immediately to mitigate the problem.

Credit Evidence:

The contractor should provide a copy of the noise and light pollution plan prior to commencement of construction. In addition, noise monitoring results should be provided to the assessor before, during and after construction. Records of complaints and actions taken to mitigate noise or light pollution should also be provided.

Energy - Construction

code	title	credits
C-EN 1	<p>Energy Metering, monitoring and minimisation on the Construction Site</p> <p>Aim: To reduce energy waste and meet energy targets through metering and monitoring of energy usage on construction sites.</p> <p>Credit Criteria: The credit is provided for minimising energy use and meeting energy targets by adopting metering and monitoring of energy usage. This credit relates specifically to energy consumption in construction related facilities (e.g. site offices, washrooms, canteens, temporary lighting and accommodation etc.) rather than the building under construction. The credit can be awarded when:</p> <ol style="list-style-type: none"> 1. metering is provided to all main incoming supplies of gas and electricity; and sub-metering to all major energy uses (e.g. lighting, small power, large appliances, catering, kitchens etc.) 2. energy consumption targets are set for the construction site and measures which enable those targets to be met are identified. Measures to minimise energy usage could include: <ul style="list-style-type: none"> • temporary lighting which is zoned and can be switched on and off according to occupancy and daylight; • using luminaries with an efficacy greater than 70 lumens per watt. 	1

- temporary space heating load to be met by energy sources other than national Grid generated electricity.
- using a temporary hot water heating plant which has an efficiency of > 90%.
- checking regularly that computers, printers and all associated equipment and site facility equipment, are switched off when not in use;
- construction equipment is switched off and not left on idle.

Credit Evidence:

The construction team should provide documented evidence of the metering to be used (e.g. plans showing locations and types of meters). In addition, the contractor should provide evidence of the energy targets set and the actions implemented to meet them.

Energy - Operation

code	title	credits
O-EN 2	<p>Energy Consumption Reporting</p> <p>Aim: To demonstrate the energy performance of the building and occupants.</p> <p>Credit Criteria: The credit is awarded where:</p> <p>Monitoring results are collated on a monthly basis and reported to occupants via notice boards, email or other appropriate means. The reporting must include the energy targets for the building and actions which have been implemented to improve energy performance AND monitoring results which are collated on an annual basis and reported through the appropriate chain of command.</p> <p>Credit Evidence: In consultation with the DIO Area Utilities Manager, the assessor should be provided with copies of all reports for the previous twelve months, with details of how the information was disseminated to occupants and through the chain of command.</p> <p>Further Information:</p>	1

Energy - Operation

code	title	credits
O-EN 3	<p>CO2 Emissions</p> <p>Aim: To reduce CO₂ emissions from operation of the building.</p> <p>Credit Criteria: The building's operational CO 2 emissions should be calculated using the first 12 months of energy bills, and compared against the buildings TER as calculated for credit D-EN1. Credits are awarded as follows:</p> <ul style="list-style-type: none"> • No improvement = 0 • > 10% = 1 • > 20% = 2 • > 30% = 3 <p>Credit Evidence: The assessor should be provided with documentation showing the building's operational CO2 emissions and % improvement over the Target Emissions Rate (TER) as calculated for credit D-EN1.</p> <p>Further Information:</p>	3

Internal EQ - Operation

code	title	credits
Q-IEQ 1 *	<p>Building Manual</p> <p>Aim: To ensure that the building users understand the building and its systems, in order to optimise user comfort, health, safety and productivity, while minimising resource consumption and other environmental impacts.</p> <p>Credit Criteria: The first credit is available if a building manual describing building systems and how to operate the building most efficiently has been developed. The manual must be available to all staff and should cover the following as a minimum:</p> <ul style="list-style-type: none"> • Non-technical description of the building, including heating and cooling strategy, BMS, energy efficiency measures, water systems, waste facilities, emergency systems, ventilation, lighting. • Contact details for suppliers of installed equipment. • Maintenance requirements. • Plans showing locations of meters and equipment. • Sample tables for monitoring and reporting gas, electricity and water usage. • Detail on how users can operate the building efficiently to help reduce energy, waste and water usage. 	1

A further credit can be awarded if building users were trained during handover. The training should, as a minimum:

- . introduce the Building Manual**
- . explain key building systems and how they operate**
- . demonstrate how to operate the building efficiently.**

Credit Evidence:

For the first credit the assessor should be provided with a copy of the manual. The Facilities Manager should also demonstrate how occupants are informed about the manual (e.g. inductions) and how occupants can access the manual (e.g. intranet). For the second credit a copy of the training schedule should be provided.

O-PR 3	<p>Green Purchasing Policy</p> <p>Aim: To raise environmental awareness and maximise direct environmental benefits, such as fewer emissions, less waste and more efficient resources use.</p> <p>Credit Criteria: Credits are awarded as follows:</p> <ul style="list-style-type: none"> • 0 = no purchasing policy • 1 = a purchasing policy has been developed • 2 = a purchasing policy has been implemented <p>A green purchasing policy should be developed, which aims to encourage people to:</p> <ul style="list-style-type: none"> • Review the actual need of the product; • Seek alternative goods and services; and • Purchase a greener variant with comparable if not better performance than a conventional choice. <p>The policy should include green purchasing criteria, such as:</p> <ul style="list-style-type: none"> • Resource Use and Recycling • Hazardous content • Energy • Packaging 	2

- Transportation
- Supplier Environmental reporting

Examples of materials that should be considered include:

- Cleaning products
- Building maintenance materials
- Grounds maintenance materials
- Welfare consumable items

Credit Evidence:

The assessor should receive a copy of the Green Purchasing Policy. The Facilities Manager should also confirm how staff are advised of the policy (eg induction) and demonstrate how the policy is implemented.

Procurement - Operation

code	title	credits
<p>O-PR 5 *</p>	<p>Annual Environmental Audit</p> <p>Aim: To minimise the environmental impacts of the operation of the building.</p> <p>Credit Criteria: To achieve the credit, an annual environmental audit of the building should be undertaken by a registered environmental auditor, to assess compliance with environmental legislation and regulations, policies and systems implemented within the building, and general environmental due diligence.</p> <p>The results of the environmental audit must then be used to improve the environmental performance of the building and occupants.</p> <p>Credit Evidence: The assessor should be provided with a copy of the latest audit report. The Facilities Manager must also demonstrate how the recommendations of the audit have been implemented to improve environmental performance.</p> <p>Further Information:</p>	<p>2</p>

Travel - Operation

code	title	credits
O-TR 1	<p>Green Travel Plan</p> <p>Aim: To encourage people to reduce dependence on individual motorised transport means and reduce CO₂ emissions associated with transport.</p> <p>Credit Criteria: Credits are awarded as follows:</p> <ul style="list-style-type: none"> • 0 = no green travel plan • 1 = a green travel plan has been developed • 2 = a green travel plan has been implemented <p>A green travel plan, which may be site wide, should be developed and implemented. The travel plan should include the following as a minimum:</p> <ul style="list-style-type: none"> • Background information on the site - location, numbers of people etc. • Objectives - identify what you are trying to achieve from your travel plan. The plan should encourage green transport measures such as walking, cycling, car sharing, shuttle buses to local towns or train stations etc. • Actions - identify the proposed actions/ measures for achieving your stated objectives. • Marketing - identify how you will market the Plan and the elements contained within it. • Targets - identify targets to determine whether your objectives are being achieved. • Monitoring - identify how you will monitor the 	2

effectiveness of your travel plan, what will be monitored and who will be responsible for monitoring.

- Dissemination - people will want to share in the success of the plan and will want to know what the results are.

The plan should encourage measures such as walking, cycling, car sharing, shuttle buses to local towns or train stations etc.

Credit Evidence:

The assessor should be provided with a copy of the green travel plan.

Water - Operation

code	title	credits
O- WR 1.2	<p>Minimise Water Consumption During Operation</p> <p>Aim: To reduce water waste, water overuse and meet water targets through metering and monitoring of water usage in the building.</p> <p>Credit Criteria: Credits are provided for minimising water use and meeting water targets by adopting metering and monitoring of water usage. Credits are awarded as follows:</p> <ul style="list-style-type: none"> • The first credit is achieved for setting up and implementing a procedure for monitoring all water meters on a monthly basis. • If the first credit is achieved, the second credit can be achieved for setting water consumption targets for the whole building. These targets must be reviewed on an annual basis, to reflect improvements in building operation and changes to best practice benchmarks. As a minimum, office buildings should conform to the Greening Government Commitment of >6m³/FTE/Year • If the first and second credits are achieved, the third credit can be achieved for identifying actions and setting up an action plan (with allocated responsibilities and deadlines for actions) which will enable site operations to meet water targets. The action plan must be reviewed on an annual basis to reflect changes to water targets and changes in water performance of the building. • If the first three credits are achieved, the final credit can be achieved for demonstrating that actions from the action plan have been implemented by their 	4

deadline.

Credit Evidence:

The assessor should be provided with the following evidence to award each credit:

- Credit 1 – copy of the monitoring procedure, and monitoring results for the previous twelve months of operation.
- Credit 2 – copy of the water consumption targets, and the procedure for reviewing the targets on an annual basis.
- Credits 3&4 – copy of the action plan, showing responsibilities, deadlines and the status of actions, and the procedure for reviewing actions on an annual basis.
